

ÖGHT Webinar **„Tendinopathies of the forearm and hand – The Challenge of Short Term vs Long Term Good Result“**

Webinar Beschreibung:

Someone once said about tendinopathies that “treatment tends to be more of an art than a science”. Lots of truth in that although there are facts, we can hold on to along the artistic path when we treat this group of patients and individuals.

This session will address tendinopathies of the forearm and hand and present crucial facts about the healing and restoring tissue quality processes of tendinopathies. Beside this, functional anatomy to give clinical relevance for us as therapists in our search for best regime for our patients suffering from tendinopathies.

The short term good result is know as the result of symptom relief treatment without the more challenging handling of the cause which is necessary for long standing good results. Tools for this will be presented and discussed.

Flowsheets and cases will be presented to give clinical guiding and tips to illustrate the theories.

Wann: 13.06.2024 17.00 – 19.00 Uhr
